Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Examiner pointed out that either of the clients (66) or (68) can initiate the failover process. After the failover has process has completed, software and/or data from RAID (80) can be accessed by workstation (66). The network architecture of FIG. 5C additionally shows that data or software can be transferred from workstation (66) to workstation (68), as shown by the dashed line in FIG. 5C. Examiner suggested claiming the features of FIG. 2, in which three software components with specific functionalities are downloaded to the workstation so that the functionality of the workstation is changed from being that of a client to that of a server.
